The MindTouch editor is a WYSIWYG editor that automatically creates HTML from visual authoring.

- Editor Tools
- Tables
- Files and Media

- Layout Options

New Pages via Templates | Customize Pages | Table of Contents

- New Pages
Customize Pages
- Table of Contents (TOC)

### Authoring Process

Configure authoring processes and manage content drafts.
- Authoring roles
- Draft authoring
- Edit Summary
- Global find and replace
- Implement a content workflow
- Revision History

### Capture Manager

The Capture Manager solution for MindTouch enables additional content publishing options.
- Capture Manager Report
- Classifications in Capture Manager
- Draft alternatives
- Flag process in Capture Manager
- Implementation strategy for Capture Manager
- New Page Templates in Capture Manager
- Permissions by Role in Capture Manager
• **Reuse content**

![Reuse content icon]

Use existing content, either an entire article or sections of an article, in another location of your site.

◦ Display titles of reused sections
◦ How to reuse content
◦ Reused page not loading

• **DekiScript**

![DekiScript icon]

DekiScript is a MindTouch proprietary programming language to create custom objects in your MindTouch site.

◦ Add DekiScript to a page
◦ Build a widget to display file attachments
◦ Display content only on a page with specific tag
◦ Create custom conditional content groups
◦ Date functions
◦ Definitions and Operators in DekiScript
◦ DekiScript 101
◦ Display Page ID on a page with DekiScript
◦ Dynamic controls
◦ Errors in DekiScript
◦ Exclude pages from the popular pages list
◦ If statements in DekiScript
◦ JSON functions
◦ Learn to use DekiScript
◦ List and map elements in DekiScript
◦ List functions
